Madenet Technical Report

Company: Madenet

CTO: Akani Miyen

Project Summary: Computer Diagnostics and Repairs

Madenet recently conducted a full diagnostic assessment on the computer systems at the facility. Under the technical leadership of our CTO, Akani Miyen, the team successfully identified and addressed various issues affecting system performance.

Upon inspection, it was found that many of the computers were outdated and had hardware-related issues. After careful diagnostics and upgrades, we successfully repaired and updated 11 computers, which are now functioning optimally with improved performance.

Summary of Findings:

- Total Computers with Issues: 19

- Computers Successfully Repaired and Updated: 11

- Total Network Cables Identified: 30

- Estimated Network Channel Server Range: 30 to 40 Channels

Detailed Device Status:

Computer ID	Issue(s) Identified
SH CL 11	Keyboard, Mouse
SH CL 13	Mouse
SH CL 21	System
SH CL 19	System, Keyboard, Mouse
SH CL 22	Mouse
SH CL 08	Mouse

SH CL 10	Keyboard, Mouse
SH CL 05	Keyboard, Mouse
SH CL 06	System (RAM), Keyboard, Mouse
SH CL 07	System (RAM), Keyboard, Mouse
SH CL 04	System (RAM), Keyboard, Mouse
SH CL 01	System (RAM), Keyboard, Mouse
SH CL 02	System (RAM), Keyboard, Mouse
SH CL 23	System (RAM), Hard Drive, Mouse

Work Completed:

- Upgraded outdated systems and replaced faulty hardware components.

- Repaired and updated 11 computers for stable and efficient use.

- Identified and documented 19 systems with minor or major hardware faults.

- Ensured that networking infrastructure (30 cables, 30–40 channel server) is compatible with updated systems.

For any follow-up, further optimization, or expansion of your IT infrastructure, Madenet remains available to provide continued technical support and system enhancement services.
